

Orin Kest

Realtime Graphics Programmer

Realtime rendering specialist with a strong focus on frame architecture, shader systems, GPU debugging, and deterministic tooling.

loc: Fictional District 7

env: Linux / X11

mail: orin.kest@example.test

git: github.com/fake-orin-kest

/// SKILLS

Architecture:

Render Graphs RHI Design ECS
Resource Lifetime

Debugging:

RenderDoc GPU Capture
Validation Layers Sanitizers

Infrastructure:

CMake Git Ninja Linux CI

Languages:

C++ C Rust Lua Python Bash

Rendering:

Vulkan OpenGL GLSL HLSL
SPIR-V Deferred Rendering

/// EDUCATION

MEng Interactive Systems

Imaginary Technical University

Status: Graduated

Diploma in Digital Systems

Fictional School of Engineering

Status: Completed

/// PERFORMANCE

CaptureMode: GPU + CPU markers

FrameBudget: 16.67 ms target

Notes:

Designed for sustained realtime workloads
No network dependency
Deterministic test scenes

Validation: true

/// PROJECTS

Aurora Framegraph (Rendering Architect)

Experimental framegraph that derives pass ordering and resource transitions from declared read/write relationships.

C++20 Vulkan Render Graph SPIR-V

Nebula Material Lab (Graphics Programmer)

Material sandbox exploring bindless texture arrays, descriptor indexing, and shader-driven material selection.

C++ GLSL Vulkan GPU Driven

Quanta Capture (Tools Engineer)

Fictional capture utility that records synthetic frame metrics and exports compact debugging reports.

C++ JSON CMake
