

Ari Venn

Senior Rendering & Engine Programmer

Senior-level fictional profile designed to create a high-content single-page CV. Specializes in native engines, rendering architecture, graphics debugging, and editor systems.

loc: Fictional Metropolitan Zone

env: Linux / X11

mail: ari.venn@example.test

git: github.com/fake-ari-venn

/// SKILLS

APIs:

Vulkan OpenGL GLSL SPIR-V SDL

Engine:

ECS Resource Manager Asset Pipeline

Scene Graph Editor

Languages:

C++17 C++20 C Lua Python Bash

Rendering:

Deferred Forward+ PBR

Shadow Mapping Post Processing

Compute

Systems:

Linux Threads Memory File IO

Profiling

Tooling:

ImGui RenderDoc CMake Ninja Git

/// EDUCATION

MSc Real-Time Rendering

Imaginary Graduate School of Graphics

Status: Completed

BEng Computer Engineering

Fictional Polytechnic

Status: Completed

/// HIGHLIGHTS

Interests:

GPU-driven rendering Shader reflection

Render graphs Editor UX

Practices:

Small reproducible tests

Warnings-as-errors

Validation-first development

Strengths:

Low-level debugging

Rendering architecture API design

Performance analysis

/// CAREER

Current: Independent fictional engine development

Environment:

Native code Linux GPU-focused systems

Preferred:

Graphics Programmer Engine Programmer

Rendering Engineer

/// PROJECTS

Vector Dawn (Lead Engine Programmer)

Fictional native engine covering renderer initialization, resource management, scene submission, editor integration, and asset inspection.

C++ Vulkan ImGui CMake ECS

Nightjar Renderer (Graphics Lead)

Experimental deferred renderer with G-buffer construction, clustered lights, material indirection, shadow passes, and post-processing.

C++ Vulkan GLSL Compute PBR

Forge Editor (Editor Programmer)

Fictional desktop editor with dockable panels, scene inspection, gizmos, asset browsing, and renderer diagnostics.

C++ ImGui ImGuiizo Lua

Atlas Importer (Pipeline Engineer)

Asset processing experiment covering meshes, materials, textures, metadata validation, and import diagnostics.

C++ Assimp Lua CLI

Signal Bench (Performance Engineer)

Synthetic benchmark suite for CPU submission cost, descriptor updates, memory pressure, and frame pacing.

C++ Vulkan Profiling
