

Rin Ostel

Game Engine Rendering Programmer

Project-heavy profile intended to test repeated cards, long technology tag groups, and balancing between dense sections.

loc: Pinegrid, Testland

env: Linux

mail: rin.ostel@example.test

git: github.com/fake-rin-ostel

/// SKILLS

Cpp:

C++
Templates
STL
Multithreading

Engine:

ECS
Scene Systems
Materials
Textures

GPU:

Vulkan
OpenGL
GLSL
Compute

Tools:

CMake
Ninja
Git
RenderDoc

/// EDUCATION

BSc Game Engine Development

Fictional Game Technology
Institute

Status: Graduated

/// PROJECTS

Ember Scene (Rendering Programmer)

Fictional scene renderer focused on camera, mesh submission, materials, and depth testing.

C++
Vulkan

Mosaic Materials (Graphics Programmer)

Material prototype testing indexed textures, normal maps, roughness, and runtime material changes.

C++
GLSL
Vulkan

Orbit Shadows (Rendering Programmer)

Shadow-map playground with directional and point-light experiments across synthetic scenes.

C++
GLSL
Depth

Pulse Post (Graphics Programmer)

Post-processing chain for tone mapping, bloom, vignette, and color transforms.

Vulkan
GLSL
Fullscreen Pass

Slate Editor (Engine Programmer)

Editor shell containing scene hierarchy, inspector data, viewport controls, and renderer diagnostics.

C++
ImGui
ImGuiizmo

Crate Import (Pipeline Programmer)

Fictional asset importer testbed covering mesh and material metadata.

C++
Assimp
Lua
